

# JavaScript Hello Sandhya Program :

We will use these three ways to print `'Hello, Sandhya!'`

1. using console.log():

`console.log()` is used in debugging the code.

```
console.log("Hello, Sandhya!");
```

2. using alert():

The `alert()` method displays an alert box over the current window with the specified message.

```
alert("Hello, Sandhya!");
```

3. using document.write():

`document.write()` is used when you want to print the content to the HTML document.

```
document.write("Hello, Sandhya!");
```
